## PERSONAL STATEMENT

Computer Science and Engineering student with research interests in Artificial Intelligence, Deep Learning, Brain-Computer Interfaces, and neurorehabilitation. My academic and research work focuses on EEG-based motor imagery, neural signal processing and reconstruction, and AI-driven approaches for post-stroke rehabilitation. I have experience with CNN, LSTM, generative models, machine learning, data analysis, and EEG signal processing through research and academic projects. I am particularly interested in combining AI, Data Science, and data-driven methods to develop intelligent systems for neural engineering, assistive technologies, and healthcare. My interests also extend to biomedical data analysis, pattern recognition, and intelligent decision-making systems. I aim to explore practical AI solutions that can address complex problems in healthcare and human–machine interaction. Seeking a research-oriented Master's degree to strengthen my technical and research expertise while contributing to innovative AI-driven solutions in neural engineering and intelligent healthcare.
